- Physical therapy
- Recreational therapy
- Rehabilitation services
- Social skills services
- Speech language pathology

Center for Autism Spectrum Disorders Clinical Services: Clinical Services:

Over 200 children are seen in the CASD each year for diagnostic and etiological evaluations related to autism spectrum disorder, and over 100 children per year receive treatment from one or more of the CASD programs. Five programs within the CASD each offer a continuum of services, including school consultation, outpatient, intensive outpatient, and day-treatment services. The four programs of the CASD are:

- the Autism Diagnostic Clinic, which provides interdisciplinary evaluations to individuals suspected of having autism spectrum disorder;
- the Severe Behavior Disorders Program, which serves school-aged children with destructive behavior (e.g., aggression, self-injurious behavior);
- the Early Intervention Program, which provides early intensive behavioral intervention for young children with autism spectrum disorder in order to decrease the primary symptoms of this disorder and improve the child's cognitive, social, communicative, and self-help skills;
- The Virtual Care Program, which provides assessment and treatment services to children and families affected by autism spectrum disorder in rural and remote locations via advanced telehealth methods.
